

# POST & RAIL BARRIER SYSTEM

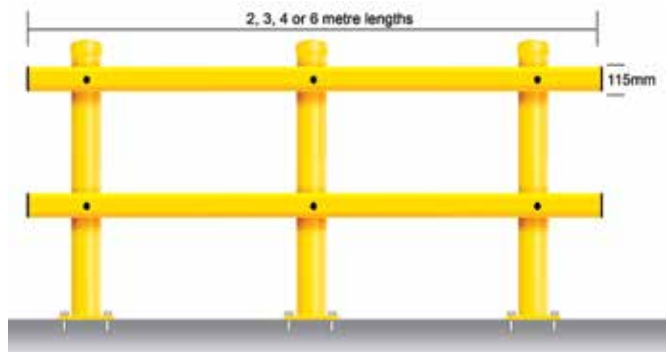

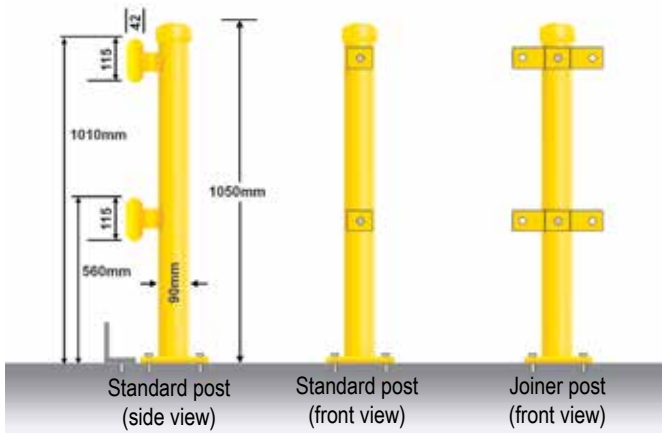

## POST & RAIL BARRIER SYSTEM

Our Defender post and rail barrier systems are designed to provide protection for pedestrians and property from a variety of hazards. Forklifts, cars, trucks and pedestrians do not mix in a busy industrial environment. Clearly designated pathways and warning signs are a must but for areas where total protection is required, the Defender barrier system is the ideal solution. The system is easily customised to suit your needs. It's modular design allows for easy replacement of components in the event of damage and economical transport cost. It is easily assembled and provides a highly visual and highly effective barrier. An extra addition to the system is a pallet safety angle which prevents items from intruding the safety area at floor level.

- Available with a variety of rail lengths
- Bolt down or in-ground posts
- Highly visible yellow finish as standard
- Damaged components replaced easily
- Strong steel protection for pedestrians
- Easy to assemble
- Optional steel angle for extra protection at ground level, available in many sizes

Code	Style
DPR/BP	Bolt down post
DPR/BPC	Bolt down joiner post
DPR/IP	In-ground post
DPR/2	2 metre rail
DPR/3	3 metre rail
DPR/4	4 metre rail
DPR/6	6 metre rail
DPR/PSA	Pallet safety angle
DPR/BPCNR	Corner Post
